

API Documentation

We Provide Api for Company uses if company needs to use api, company can request an company api key. Then super admin can generate api from the system specifically for that registered company using the company tab. Api includes branch details and order details.

GET Orders list

https://we-pos.com/api/orders?branch_id=2

This is a GET request and it is used to "get" data from an endpoint. There is no request body for a GET request, but you can use query parameters to help specify the resource you want data on (e.g., in this request, we have `branch_id=2`).

A successful GET response will have a **200 OK** status, and should include some kind of response body - for example, HTML web content or JSON data.
